

Customers: Please deliver this instruction sheet to the Quest staff along with your lab order.

Quest National Account Number: 97508147

• Do NOT enter patient data in Care 360.

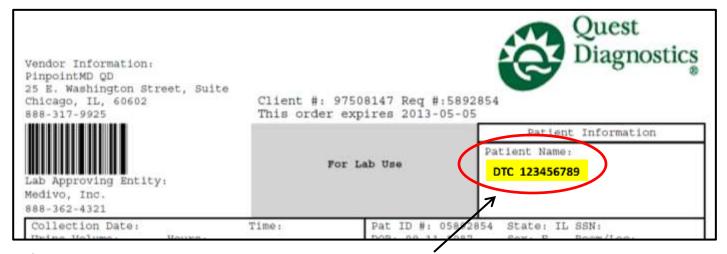

LABELING INSTRUCTIONS

• This requisition may use an alphanumeric privacy ID for the **patient name** field instead of the patient's name. Please label the specimen samples with "DTC" plus the nine-digit privacy ID listed on the requisition. The specimen containers should be labeled as followed:

First name: DTC

Last name: nine-digit number

Example: DTC 123456789 (Include a space between DTC and the privacy ID.)

• *Important*: Entering anything other than the exact *requisition patient privacy ID code* will cause the test to be invalidated. This is particularly important for HIV tests, since by law the test CANNOT be performed if the specimen is mislabeled.

URINE SPECIMEN COLLECTION INSTURCTIONS

- The urine must be transferred to a UPT tube (BD Probetec or Aptima Combo) within 1 hour of collection. Urine cups CANNOT be processed for these tests. If a urine cup is sent for this order, the test will be invalid.
- Urine must be between the fill lines; over or under-filling will invalidate the specimen.
- Remind patient NOT to clean the genital area before collecting the specimen.

QLS LAB TESTING REQUIRED

All samples must be sent to Quest Diagnostic QLS laboratory. Sending the samples to a non-QLS laboratory
will cause the sample to not be resulted properly. Only PinPoint MD paperwork should be included with the
specimen.

Questions? Please call PinPoint MD (formerly DTCMD) toll-free at 866-749-6269.
